

Company

Müller Präzision in Cham exists since 1974. We offer the whole spectrum in the metal processing industry.

From the very beginning the company has expanded steadily and the number of personnel has increased to 480 so far. This is mainly due to our motivated and very qualified staff (starting with the vocational training). Almost all apprentices were taken over since 1974. Only this personnel can manufacture our quality products.

The employees are the fundament of our success. At the same time we cultivate a special corporate culture. The catchword is: gain-sharing (our staff participates in the success of the company). Each one can find out the current figures on the computer terminal at the communication centre. That way he knows how his department is working at present and he is able to retrace the value of his own work.

This means for our corporation that we can approach the future tasks with motivated and satisfied staff.

We are a member of:
